Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Michels (DE 4437149 A1).

Michels discloses a method and apparatus for forming cellulose shaped bodies where the cellulose suspension from cellulose and an aqueous phase in a ratio of 1:10 and the mixture being stirred 120 minutes while enzymes are added. The solution is then dewatered and at least partially recycled. Later NMMO is added to 90mol% (equals about 78wt%) and excess water is evaporated. (See the submitted translation.)

Michels does not disclose homogenizing in a first shearing zone the dewatered cellulose.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to include an additional step of shearing the cellulose before the addition of NMMO, because homogenizing a mixture prior to adding a component such as NMMO is known in the art. This allows the NMMO to be more effectively mixed.
